

Yazeeth Najeeb

Cloud & DevOps Engineer | SRE | IT Infrastructure & Operations

Immediate Joiner | Inside UAE

UAE Phone Number: +971 568336149 | SL Phone Number: +94 755116756

Email: yazeethnajeeb@gmail.com

LinkedIn: <https://www.linkedin.com/in/yazeethnajeeb>

GitHub: <https://github.com/yazeeth/>

Portfolio: <https://yazeeth.org.lk/>

Address: X03, England, Cluster, International City Dubai, UAE

Nationality: Sri Lankan | Date of Birth: 11/07/1998 | Passport Validity: June 2035

Visa Status: Visit (Can be transferred to self-sponsored visa)

SUMMARY

IT professional with 6+ years of experience across cloud operations, DevOps, infrastructure, systems administration, networking, application support, and production operations. Hands-on experience with AWS and Azure, Infrastructure as Code using Terraform and Ansible, CI/CD automation, Docker, Kubernetes, monitoring, scripting, IAM, and Linux/Windows administration. Experienced in incident management, troubleshooting, production support, cloud automation, and cross-functional collaboration. Seeking Cloud, DevOps, SRE, Infrastructure, IT Operations, or Technical Support opportunities.

WORK EXPERIENCE

Senior Cloud Operations Engineer

IGT1 (February 2026 – August 2026)

- Project: Kyriba (Global SaaS-based liquidity performance platform Company)

Senior IT Operations Engineer

Sysco LABS, Sri Lanka (February 2022 – Jan 2026)

- Project: Sysco – US-Based Food Distribution Company

IT Support Engineer

HCL Technologies, Sri Lanka (August 2020 – February 2022)

- Project: IKEA – Sweden-Based Furniture Retail Company

Systems Administrator

hSenid Software International (February 2020 – August 2020)

EDUCATION

MSc in IT (Cybersecurity) – 2025 (MOFA Attested)

Sri Lanka Institute of Information Technology (SLIIT)

Post Graduate Diploma Information Technology – 2024

Sri Lanka Institute of Information Technology (SLIIT)

BSc (Hons) IT (Computer Systems and Network Engineering) – 2022 (MOFA Attested)

Sri Lanka Institute of Information Technology (SLIIT)

SKILLS & TECHNOLOGIES

Cloud Platforms & Services: AWS (EC2, S3, IAM, VPC, Lambda, ECS/EKS, ECR, RDS, ELB, CloudWatch, SQS/SNS, Route 53, CloudFront, Secrets Manager, DataSync, AWS CLI); Microsoft Azure (Subscriptions, Resource Groups, Entra ID/Azure AD, Virtual Machines, Azure DevOps, Pipeline and Repo Management, VNets, Storage Accounts, Blob Storage, Azure Files, App Service, Key Vault); Google Cloud Platform (GCP), Oracle Cloud Infrastructure

DevOps, CI/CD & Infrastructure as Code: Terraform (templates, plan and apply), Ansible (playbooks, AWX jobs/runs, inventories, limits), AWS CloudFormation, Jenkins, Azure DevOps, Argo CD, GitHub Actions, SonarQube.

Containers, Kubernetes & GitOps: Docker, application containerisation, Kubernetes deployments, GitOps deployment workflows, Argo CD application sync, Amazon ECS, managed Kubernetes (EKS, AKS, GKE, OKE), OpenShift, Helm charts, Kops, Rancher, Docker Hub

Monitoring & Observability: Datadog, Prometheus, Grafana, AWS CloudWatch, Dynatrace, SolarWinds, Nagios, Wavefront; alerting, dashboarding, and system-health monitoring, Splunk logs management, Datadog Dashboards, Handling P1 /P2 Alerts, Monitoring escalating alerts and incidents, handling supporting on-calls, production deployment support.

Programming, Scripting & Configuration: Python, JavaScript, TypeScript, Java, C, C++, Bash/Shell, PowerShell, SQL, YAML, JSON, XML

Version Control, Development Tools & AI-Assisted Development: Git, GitHub, GitLab, Bitbucket, Git Bash, Visual Studio Code, Visual Studio, Eclipse; pull requests (PRs), merge requests (MRs), code review, Claude Code, ChatGPT, OpenAI Codex, GitHub Copilot, VS Code AI extensions; AI-assisted coding, troubleshooting, bug fixing, documentation, automation, and full-stack development

Operating Systems, Virtualization & Backup: Linux administration (Ubuntu, CentOS, Red Hat), Windows Server, Windows 10/11, macOS, Hyper-V, VMware Fusion, VMware vSphere, VMware ESXi, virtual machines, hypervisors, snapshots, backup and restore, Veeam

IT Service Management & Delivery: ServiceNow (Incident, Problem, Change, Release, and request management), BMC Remedy, Jira, Jira Service Management, Opsgenie, Confluence, ITIL 4, Agile (Scrum and Kanban), knowledge-base and SOP documentation

Networking & Security: Layer 2 switching, Layer 3 routing, static and dynamic routing, VLANs, trunking, ACLs, LAN/WAN, TCP/IP, IPv4/IPv6, ARP, ICMP, STP/RSTP, OSPF, EIGRP, BGP, RIP, DHCP, DNS, wireless access points, wireless LAN controllers (WLC), structured cabling, LAN network designing, Fortinet and pfSense firewalls, SSL/TLS certificate renewal, AnyConnect VPN, Wireshark, Nessus

Identity, Access & Endpoint Management: AWS IAM, Active Directory Domain Services, Okta, Intune, CyberArk, HashiCorp Vault, access-key rotation, role-based access control

APIs & Integration: REST APIs, Postman, Swagger/OpenAPI, Insomnia, curl, Apigee, OTDS REST APIs, API testing, client authentication, and access control

Databases & Data Platforms: PostgreSQL, MySQL, Oracle Database, Microsoft SQL Server, MongoDB, Redis, Snowflake, BigQuery, Amazon Redshift, OpenSearch, DBEaver

Application & Full-Stack Development: AI-assisted full-stack and backend development, secure application development, React, Angular, Express.js, Node.js, REST APIs, JWT and token-based authentication, frontend implementation, responsive UI, basic UI/UX design, form validation, HTML, CSS, Apache Tomcat, Nginx, XAMPP, WAMP, Web Hosting, Domain purchasing and configure DNS, SSL/TLS Configurations, SSL Certificate management.

Enterprise Operations & Support: OpenText Enterprise Information Management (EIM), ERP/SAP systems, Microsoft 365, SharePoint, IBM Maximo, GLPI, cPanel, PuTTY, MobaXterm, TeamViewer, Bomgar, n8n, Zapier, Salesforce

Professional Skills: Incident response, root cause analysis, L2/L3 support, production support, functional and regression-test support, bug investigation and fixing, release coordination, stakeholder communication, cross-functional collaboration, team leadership, problem solving, knowledge sharing

CERTIFICATIONS

- **ITIL 4 Foundation - Completed**
 - Issued Sep 2024 · Expires Sep 2027
 - Credential ID GR671692833YN
- **AWS Solutions Architect Associate – SAA C03 – In Progress**
- **Kubernetes and Cloud Native Associate (KCNA) – In Progress**
- **Red Hat Certified System Engineer - In Progress**
- **Azure Fundamentals – AZ-900 – In Progress**
- **CCNA**

DUTIES & RESPONSIBILITIES

- Diagnose and resolve application, infrastructure, and network issues within SLA targets, minimizing service interruptions.
- Manage incidents, problems, service requests, and change tickets using ServiceNow (SNOW) and BMC Remedy ITSM tools, ensuring timely resolution
- Maintain and update Knowledge Base (KB) articles, Standard Operating Procedures (SOPs), and system documentation in Confluence and ServiceNow to support knowledge sharing and process standardization.
- Coordinate and track tasks using Agile methodologies (Scrum and Kanban) in Jira, ensuring efficient sprint planning, progress monitoring, and timely delivery.
- Manage Production, Staging, QA, and UAT environments, ensuring consistency, stability, and smooth operation during releases.
- Design, implement, operate, and continuously optimize cloud infrastructure across AWS, GCP, and Azure, leveraging services such as EC2, S3, IAM, VPC, Lambda, CloudWatch, CloudTrail, SQS, SNS, and ECS, with a strong focus on high availability, security best practices, performance optimization, and cost efficiency.
- Collaborate with development and DevOps teams to perform root cause analysis, deploy fixes, and enhance application performance.
- Build and manage CI/CD pipelines using Jenkins, ArgoCD enabling smooth deployment automation and rollback procedures.
- Implement and manage Infrastructure as Code (IaC) using Terraform, Ansible (configuration management), and AWS CloudFormation to ensure consistent, repeatable, and scalable environment provisioning across cloud platforms.
- Ensure cloud security and compliance by managing AWS access key rotations, maintaining vulnerability scores, updating Lambda runtimes via Terraform, SSL certificate renewals, minimizing the attack surface, decommissioning unused resources, and collaborating with cross-functional teams to enforce secure and up-to-date cloud environments.
- Administer containerized applications through Docker and Kubernetes (EKS/AKS), ensuring scalable microservice orchestration, maintaining Kubernetes cluster, monitoring pod health and docker image creation.
- Designed and deployed scalable containerized web applications on AWS ECS, leveraging Amazon ECR for image management.
- Utilize monitoring tools such as Datadog, Prometheus, Grafana, and AWS CloudWatch to track system health and detect anomalies proactively.
- Test, configure, troubleshoot and manage APIs using Postman and RESTful services, including endpoint testing, client authentication, access control, and monitoring API integrations.
- Administer Linux and Windows servers, perform patching, updates, and access management in compliance with security policies.
- Develop Python and Shell scripts to automate operational and support processes, improving efficiency and reducing manual errors.
- Provide L2/L3 technical and application support for enterprise information management (EIM), content management (OpenText Enterprise Scan and OpenText Document Library) and ERP systems, handling user incidents, troubleshooting functional and technical issues, and ensuring stable operations across production and non-production environments.

- Manage and version application configurations and codes using GitHub, GitLab, and Bitbucket, ensuring proper code control and release integrity.
- Develop web applications using Angular, React, and Node.js, focusing on frontend and backend integration, responsive design, and functional user interfaces.
- Proficient in assembling and maintaining computer and network hardware, including CPU, GPU, RAM, motherboard, power supply, storage devices, and cooling systems, as well as routers, switches, and hubs, with hands-on experience in installing operating systems, troubleshooting, upgrading components, crimping cables, and creating local networks for optimal performance and connectivity, routing and switching, installing wireless APs, configure wireless routers, WLCs.

PROJECTS

- **OnlineShop** – Full-Stack E-Commerce Application — Developed a production-style e-commerce platform using React, TypeScript, Vite, Node.js, Express, Prisma ORM and PostgreSQL, implementing JWT authentication, product, cart, order, payment and admin functionality, database migrations, persistent storage and environment-based configuration. Application Repository: <https://github.com/yazeeth/online-shop> Live: <https://store.yazeeth.org.lk/>
- **Cloud-Native DevOps & CI/CD Deployment for OnlineShop** — Containerized and deployed the application on Kubernetes (K3s) running on Oracle Cloud, using Docker multi-stage builds, GitHub Actions for automated CI/CD, Docker Hub for image publishing, Argo CD and GitOps for continuous deployment, Kubernetes Ingress for application routing, PostgreSQL persistent volumes, and HashiCorp Vault for secrets management. GitOps Repository: <https://github.com/yazeeth/online-shop-gitops>
- **Automated User Access in OpenText (Sysco)** – Integrated OTDS REST APIs with ServiceNow to streamline user provisioning, reducing manual effort and improving efficiency.
- **LibertyNet ERP Data Migration (Sysco)** – Migrated large volume legacy document data from on-prem servers to an AWS-based Digital Archive by extracting files and metadata, filtering invalid and outdated records using rule-based templates, converting metadata to XML, transferring data to Amazon S3, and ingesting it through a serverless pipeline where AWS Lambda validated and indexed metadata into OpenSearch, with controlled automation using Jenkins and monitoring in place.
- **Networking (hSenid Software)** - Built and configured a small office LAN with internet connectivity using Cisco routers, switches, wireless access points, and a WLC, implementing basic Cisco routing and switching, VLAN segmentation, trunking, and centralized wireless management for reliable wired and wireless network access.
- **IAM Key Rotation Notifications (Sysco)** – Created Python & Terraform-based Lambda functions to trigger SNS alerts for IAM keys older than 90 days across all Sysco environments, enhancing security compliance.
- **AWS Access Key Rotation Automation (Sysco)** – Automated rotation and updating of AWS access keys in Sysco web application portals using UI automation tools and scripts, ensuring seamless access to AWS resources.
- **Claims Admin Portal (Sysco)** – Built a full-stack portal with Node.js, React, and Angular for user access management, role-based control, and real-time monitoring.
- **MS O365 User Migration Support (HCL)** – Provided application support for migrating users from Office 2016 to Microsoft O365 – more than 500 users.
- **Global User Access Management (HCL)** – Managed user access across Active Directory and multiple platforms over one year.
- **Redundant AD Domain Server Configuration (hSenid)** – Configured high-availability Active Directory domain servers for office network.
- **GLPI Asset Management Implementation (hSenid)** – Deployed and configured GLPI on office LAN, integrated with Active Directory to fetch user and device data, enabling centralized IT asset tracking and management.
- **Line-Following Robot (SLIIT)** – Developed an Arduino UNO-based robot with IR sensors for autonomous navigation.
